Example of a Reviewer Checklist

A checklist is a straightforward way to ensure that steps are completed in the right order. Checklists are typically unique for each project. You can use the following example as a source of inspiration for your project.

- ☐ The review request is commented on according to the **comment template**.
- ☐ The code corresponds to the practices and methods in the **coding standards**.
- ☐ The code style is designed according to the **coding standards**.
- ☐ It passed **control tests** for memory leaks
- ☐ The code change corresponds to one type of task (refactoring, new feature, but fix, config change, etc.).
- ☐ The code has unit tests.
- ☐ Tests are designed according to **unit test** guidelines.
- ☐ Test coverage ≥ 70%.
- ☐ The code or solution is appropriately documented according to the recommendations in the **user story/task**.
